SUMMARY

Full-stack developer with 2+ years of production experience across Next.js and Node.js. Work across the stack: PostgreSQL/Prisma data models, contract-first OpenAPI endpoints, and production deployments on Vercel and a self-managed VPS (Nginx, PM2). Comfortable working from specification through production release.

SKILLS

Frontend: React.js, Next.js, TypeScript, Redux Toolkit, RTK Query, Tailwind CSS, Tiptap

Backend: Node.js, Express.js, REST APIs, Socket.IO, Swagger/OpenAPI, Prisma

Databases: PostgreSQL, MySQL, Redis

Cloud & DevOps: Vercel, OVH VPS, Nginx, PM2

Tools & Concepts: Git, GitHub, JWT, PWA

EXPERIENCE

Technical Developer (Full-Stack), [Godspeed Systems](#) — Remote, India

July 2024 – Present

Open-source framework company building developer tooling for schema-driven microservices.

- Shipped [LifeMaker](#), a professional networking platform, end-to-end across a Next.js frontend and Node.js API — owning both layers from specification through production release alongside engineers and cross-functional stakeholders.
- Developed a full-stack community posts and engagement module in Next.js and Node.js — categorized posts and nested, threaded comments authored in Tiptap rich text with mentions and media embeds, plus reactions, shares, and multi-author collaboration.
- Designed a data-driven reaction system spanning 7 post categories and 8 reaction types, enforcing valid category–reaction pairs at the PostgreSQL level via composite foreign keys and enabling reaction-set changes without code deployments.
- Built out the PostgreSQL/Prisma data model spanning profiles, projects, posts, events, experiences, and education, implementing relationships and CRUD workflows across the platform.
- Diagnosed and resolved production incidents across frontend, backend, and third-party API integrations — including media uploads failing in production, traced to Nginx’s default 1 MB `client_max_body_size` silently rejecting files the application accepted up to 15 MB; raised the proxy limit to restore uploads platform-wide.
- Managed frontend deployments on Vercel and backend infrastructure on OVH VPS (Nginx, PM2) with connected vector databases across two production products, LifeMaker and Chaitanya.

PROJECTS

Notes Pitara — Academic Notes Platform ([GitHub](#) | [Website](#)) | Personal Project

Feb 2026 – Apr 2026

- Owned frontend development in Next.js, React, TypeScript, Redux Toolkit, and RTK Query, building the discovery, authentication, uploads, dashboard, and admin-console experiences.
- Defined frontend/backend API contracts and established a contract-first OpenAPI workflow, standardizing request/response structures, pagination, resource relationships, RBAC requirements, and typed frontend API integration.
- Engineered SEO-friendly hierarchical routing with dynamic metadata, canonical URLs, sitemap/robots generation, and academic hierarchy-based navigation — scoring 100 SEO and 99 Performance on Lighthouse (desktop) with a 0.6 s LCP and 0 CLS.

Sukoon Band — Live Music Booking Site ([GitHub](#) | [Website](#)) | Freelance

July 2026

- Designed and shipped the production marketing site for a Vancouver-based live music act, including a booking-request flow delivering formatted lead emails to the client via a Next.js API route and the Resend API.
- Migrated the domain off a legacy WordPress install by serving 410 Gone through Next.js middleware on an allowlist basis, deindexing stale URLs from Google faster than standard 404s would have.
- Optimized for search and social with per-page metadata, OpenGraph/Twitter cards, generated sitemap and robots routes, and AVIF/WebP image delivery via the Next.js image optimizer.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering

July 2021 – July 2025

Bhai Gurdas Institute of Engineering and Technology, Sangrur, Punjab, India | CGPA: 7.9/10
